

1

ABSTRACT OF THE DISCLOSURE

2 A television program distribution arrangement is described for use in connection with a
3 server in a home area network, the television program distribution arrangement being configured to
4 distribute television programming over a local video link. The television program distribution
5 arrangement comprises a television programming information receiver module, a television
6 programming information assembler module, and a control module. The television programming
7 information receiver module is configured to receive television programming information from a
8 plurality of sources. The television programming information assembler module is configured to
9 assemble said television programming information as received by the television programming
10 information receiver module into a unitary set of channels for transmission over the local link. The
11 control module is configured to control the television programming information receiver module and
12 the television programming information assembler module.
